

## Connecting Networks to the Real World™

### Anywhere, Anytime Access to the Home

Coactive Networks extends Internet access to every device, appliance, and computer in our homes and businesses. The Coactive Connector family of commercial and residential gateways connects common devices such as thermostats, meters, security systems, lighting fixtures, and appliances to the Internet along with PCs.

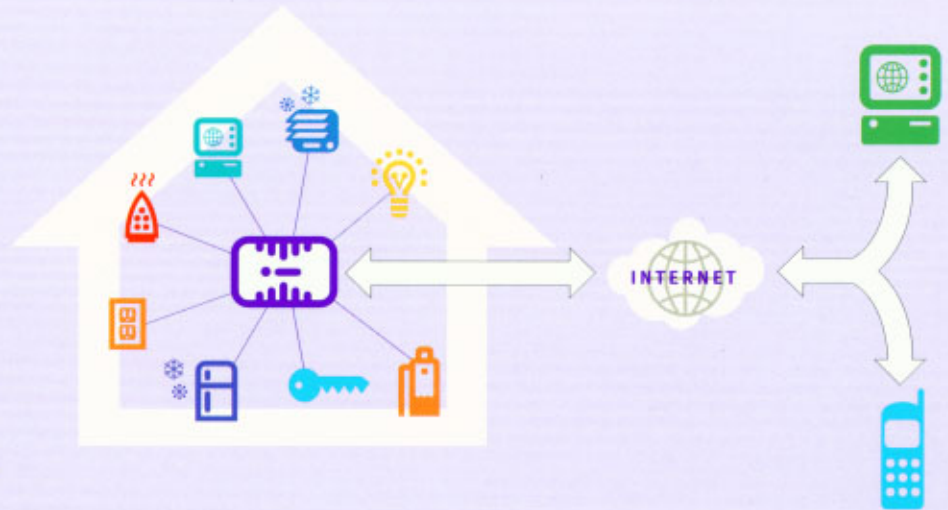

By taking an open networking approach to home control, Coactive gateways use core services such as energy management and broadband sharing to establish an infrastructure that can extend to additional applications such as home automation and home security. Coactive enables the Internet to move beyond connecting computers, and enter our physical lives via a new class of telemetry e-services that are real, personal, and essential for consumers and businesses.

Coactive Networks – Connecting  
Networks to the Real World™

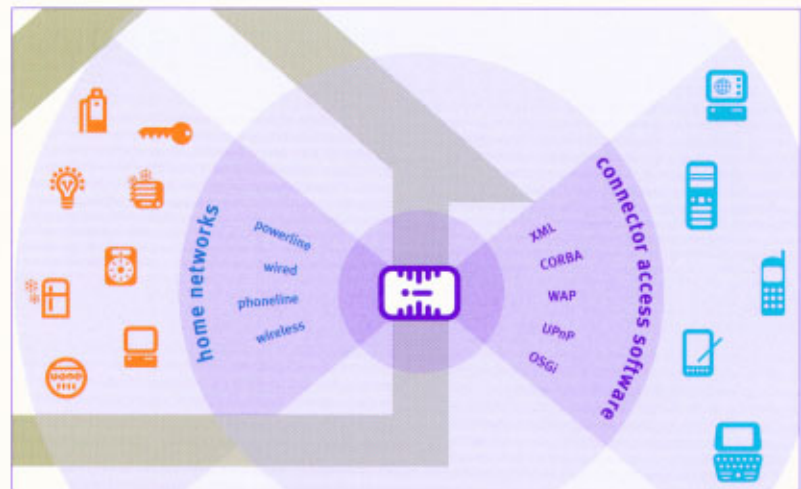

## The Coactive Connector® Gateway

The Coactive Connector® series of commercial and residential gateways uses the latest in home networking technologies to connect devices via electrical outlets and phone jacks, as well as connecting climate control and security systems via their existing low voltage wiring. By connecting every device in the home without requiring new wires, the Coactive Connector enables a new world of mass market Internet services that deliver consumers convenience, savings, and peace of mind.

## The IOConnect Architecture™

Coactive's IOConnect Architecture™ is an end-to-end software framework for connecting control devices to data networks. The IOConnect Architecture has been specifically designed to support and leverage multiple control network and Internet Protocol (IP) technologies, providing unmatched flexibility, scalability, and reduced system costs. By abstracting control information, providing a flexible environment for data translation and manipulation, and publishing a powerful distributed object interface, the IOConnect architecture allows mass market telemetry services to be delivered to the real world today.
